Subject: RI Section 10 Conceptual Site Model Review
Attachments: Rev 4 EPA_2014-01-12_DF RI_Sec10 1_clean_wLWG cg.doc

Hi Margaret—I am following up with you on your request that management review the infant breast milk pathway risk scenario. I have read through section 10 as well as the summary of section 8 (where the risks are discussed in more detail). Your request was that we consider adding language about the assumptions behind the pathway analysis and you suggested adding statements about the assumed amount of fish a nursing mother would eat in order to provide context for the reader.

After reading both sections, I do agree that there needs to be context about uncertainty and assumptions. When I considered how to do that, I had a hard time drafting the summary with this greater detail provided for the one scenario, without providing similar info for the other scenarios. I thought a different approach could be to include a paragraph just before the scenarios, which discusses uncertainty and the conservative assumptions used in risk assessments and why we make these conservative assumptions. Attached to this email is the section with my revisions, which are highlighted for you to see what was added.

Kristine will send to Bob and Jim these changes in a clean document.

I hope you have a nice weekend—(b) (6)
